## DETAILED ACTION

Claims 1-39 are presented for examination.

### *Election/Restrictions*

A attempt for provisional restriction requirement was made on Tuesday, February 21, 2006 with Applicants' Attorney, Michelle Carniaux but no response was received. Therefore a written restriction is hereby made.

Restrictions to one of the following inventions is required under 35 USC 121:

- I. Claims 1-19, drawn to a method for detecting errors in a data package receiving at least two data elements and performing a comparison, classified in class 714, subclass 776.
- II. Claims 20-39, drawn to a code point monitor comprising a processor, classified in class 714, subclass 819.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, a method for detecting errors in a data package receiving at least two data elements and performing a comparison and Group II, a code point monitor comprising a processor are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as

Art Unit: 2133

claimed does not require the particulars of the subcombination as claimed because the claims of Group I do not require the limitations of providing a code point monitor comprising a processor. The subcombination has separate utility such as in a single networked environment.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
